PERSONAL PROJECTS

Selenium Website Testing

- Incorporated Selenium automation in web testing procedures, utilizing its open-source capabilities to automate browser actions and validate website functionality across diverse platforms and browsers.

Malaria Disease Analysis and Prediction

- Developed predictive models using Python libraries like scikit-learn and TensorFlow, integrating various data sources including climate data, geographical information, and historical incidence rates. Aiding in proactive measures for disease prevention and control strategies.

Domino's Website Clone

- The Domino's website serves as an interactive platform for customers to order pizzas and other menu items online. It provides a user-friendly interface where customers can customize their orders, view current promotions.
